Telephone and Four Chiefs™ Interview

Christine is 49 years old and an internet technology specialist. Her employer, Innovation Enterprises, has her traveling throughout the Midwest to collaborate with IT teams. She's married with one daughter who is soon getting married. Her husband is a construction supervisor.

She's concerned about the darkening of her two front teeth. She was in a car accident months ago that injured her upper lip and created soreness of her front teeth. The soreness is gone but they are beginning to darken. When asked about situations where the front teeth bother her, she stated she hates the way she looks in photos. Plus, her daughter is getting married and Christine want to look great for the wedding and all the photos.

Additionally, Christine expressed concern about an on-and off-again discomfort on her lower left side. She's not sure what's wrong there. She went on to say she had one of her back lower molars removed years ago and she's gotten accustomed to it being missing.

Christine and her husband are remodeling their basement and looking forward to their trip to Spain to visit his brother.
